TikTok LIVE Companion

Release Status Version 8

Current Status

Version 8 consolidates the browser extension, local Windows speech service, Codex plugin, Android/HyperOS app and iOS source project into one shared state. New: the LIVE recommendation scanner, full debug diagnostics and the caption RAW export.

Quality and Verification

Verified: extension structure and syntax, companion-service tests 20/20, mobile project checks, Android workflow 31707719317 with APK, iOS workflow 31707712086. Sensitive keys stay outside the artifacts.

Version 8 Release Matrix

Browser

Edge/Chrome/Firefox/Safari for Windows/Android & iOS. Manifest V3, LIVE recommendation scanner, chat TTS and badge detection.

Mobile

Android and iOS share the browser reference state: chat, Game Mode, Auto-Reconnect, debug diagnostics. Both VLC paths remain unchanged.

Service

Local service Version 8 for TTS, Sherpa voices, AudD and pairing code. Protocol start, npm start fallback, new CMD repair path.

Artifacts and Checksums

Extension

tiktok-live-companion-
extension-0.8.0.zip

Mobile

Android APK and
source 0.8.0
iOS source 0.8.0
All values in
release/0.8.0/...SHA25
6.txt

Architecture Version 8

Data Flow

- Browser: TikTok LIVE tab -> content.js / hook -> background.js -> storage.session -> side panel
- Service: 127.0.0.1:43117 for TTS and AudD
- Mobile: WebView bridge -> SwiftUI/Compose -> ShazamKit
- Vercel: documentation, downloads, short-lived tokens

Browser Extension

Stable LIVE Tab Companion

Refresh and Force separate stream identities per tab. New: the LIVE recommendation scanner with a limit of 1 to 50, serial execution and cancel. Chat TTS uses Game Mode, dedupe and shortened names.

Speech Service

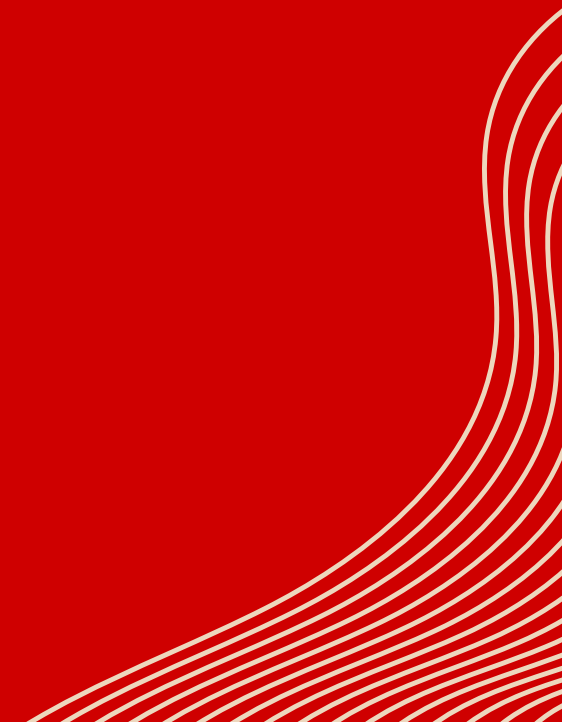

Sherpa, AudD and Local Start

The button detects a running service and starts installed setups via `tiktok-live-companion://start`. New: `Sprachdienst-reparieren.cmd`. AudD token and pairing code stay stored locally.

Mobile Apps

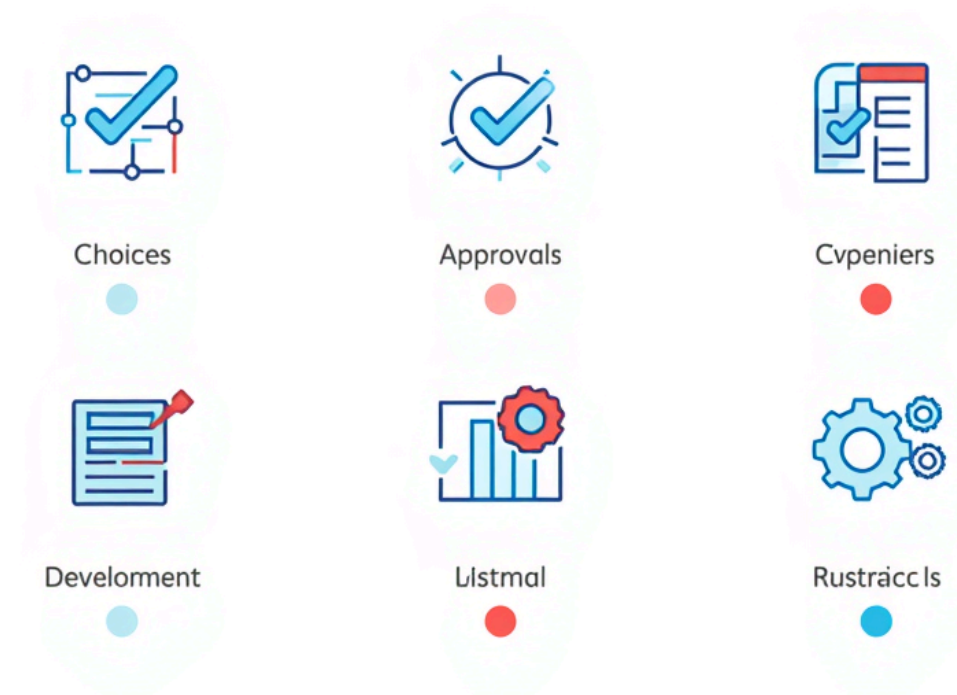

Android, HyperOS and iOS

The mobile code paths include chat/Game Mode, level protection, Auto-Reconnect with a 400 ms minimum cooldown, cache refresh without cookie loss and full debug diagnostics. VLC Ersatz and VLC Player remain unchanged.

Next Steps

Open items: separated tabs and fullscreen in the browser, effective song recognition on Android and iOS, the iOS workflow history and the mobile backlog for page elements, fullscreen and pop-ups.
